

ALOE/Exce Summary Overall.md

Below is a **polished, concise, and executive-level 1-page summary** written **directly for your potential investor/partner** who oversees ~300 Assisted Living facilities and is deeply invested in PointClickCare.

This messaging is calibrated for:

- A sophisticated operator,
- Already PCC-centric,
- Looking for scalable operational excellence tools,
- Needing to understand how this platform *expands* the value of PCC, not replaces it.

Executive Summary: The Assisted Living Operating Environment (ALOE)

A Strategic Expansion Platform That Complements PointClickCare and Scales Across 300 Facilities and Beyond

The Vision

Assisted Living communities run on hundreds of daily operational tasks—hydration, toileting, ADLs, safety checks, activities, family updates, incident follow-up, staffing coverage, and building operations.

PointClickCare (PCC) is the clinical record. What's missing is the *Operational Record*.

The **Assisted Living Operating Environment (ALOE)** fills this gap by standardizing how care is delivered, supervised, documented, and communicated across every shift and every building.

This is not an EMR competitor. This is the **operational layer PCC does not provide**, designed specifically for AL/MC staffing models and workflows.

Starting Small: Modules #1–#3 (High-Value, Low Friction)

These first modules can be deployed quickly, deliver immediate ROI, and require **zero disruption** to PCC.

1. Care Task Automation & Daily Operations Visibility

Digitizes ADLs, hydration, rounds, toileting, vitals, and shift tasks into a mobile interface caregivers actually use.

- Reduces missed care and survey risk
- Replaces paper & whiteboards
- Creates real-time visibility for EDs and regionals

PCC comparison: PCC's ADL workflows are SNF-oriented, too clinical, and rarely adopted in AL. **ALOE complements PCC by handling daily operational care tasks.**

2. Family Transparency Portal

Daily updates, photos, notifications, fewer inbound calls, and significantly higher family satisfaction.

- Modern communication layer AL families expect
- No PCC equivalent designed for AL

PCC comparison: Messaging and updates in PCC are limited and not AL-focused. **ALOE fills the family-experience gap.**

3. Incident Reporting & Compliance Manager

Guided fall/incident workflows, corrective action tracking, standardized state packets, and portfolio-level risk dashboards.

- Strongest early enterprise value
- Reduces citation exposure across 300 buildings
- Creates consistent documentation operators never get from paper

PCC comparison: PCC incident management is generic and SNF-leaning. **ALOE provides structured AL-specific workflows and ready-to-review documentation.**

Scaling Up: Modules #4–#10 (Operational OS Expansion)

Once the foundation is in place, additional modules create a fully unified operating system:

4. Staff Scheduling & Coverage Visibility

5. **Life Enrichment & Engagement Tracking**
6. **Maintenance & Work Order Management**
7. **Assessment & Service Plan Builder (AL-centric)**
8. **Infection Control Dashboard**
9. **Predictive Staffing & Acuity-Based Allocation**
10. **Billing Assist & Private-Pay Ledger Tools**

Each module is designed to **layer on independently**, allowing selective adoption and rapid scaling.

How ALOE Compliments PCC

Your current PCC investment remains the clinical backbone. ALOE becomes the **operational layer** that PCC does not attempt to own.

PCC = Clinical system

- eMAR
- Assessments
- Diagnoses
- Physician orders
- Billing (SNF)
- Clinical documentation

ALOE = Daily operations system

- Care delivery execution
- Task accountability
- Incident workflows
- Family communication
- Staffing visibility
- Maintenance & facility operations
- Engagement tracking
- Risk management dashboards

Together, they create the first complete digital ecosystem for Assisted Living.

Why This Matters for Your 300 Facilities

A unified AL operating system provides:

- **Standardized care delivery across all buildings**

- **Consistent incident documentation ready for survey review**
- **Reduced corporate risk & liability**
- **Higher family satisfaction → improved census & reputation**
- **Increased caregiver retention through simpler tools**
- **True visibility at the regional & enterprise level**
- **Data-driven decision making previously impossible in AL**

This platform gives you the ability to **run AL like a scaled, modern operation**—with dashboards, alerts, consistency, and predictable outcomes.

The Greater Market Potential

Beyond your 300 communities:

- ~30,000 AL communities in the U.S.
- ~5,500 standalone MC communities
- ~15,000 board-and-care/RCFEs
- Few are using PCC for operations; **nearly all lack modern ops tools**
- The combined annual TAM for an ALOE is enormous

This is the *missing category* in senior living technology—a blue-ocean opportunity adjacent to PCC rather than threatening it.

The Message in One Line

PCC records the care. ALOE ensures the care actually gets delivered.

This is the system that brings true operational accountability and visibility to Assisted Living—starting with three low-friction modules and expanding into a full operating ecosystem.

If you'd like, I can also produce: ✓ A polished one-page PDF for email or handout ✓ A board-level slide deck version ✓ A script you can use to present this live ✓ A roadmap visual showing 1–3 → 4–10 phase rollout
