

ALOE/ALOS overview.md

Here is the revised, investor-ready vision summary.

★ Vision: A Complete Assisted Living Operating Environment (ALOE)

PointClickCare (PCC) is the leading **clinical EMR** for skilled nursing and medically oriented workflows. But **Assisted Living & Memory Care (AL/MC)** are **fundamentally operational businesses**, not clinical ones.

The AL Operating Environment (ALOE) fills the operational void that PCC does not cover:

- Daily task execution
- Family communication
- Incident workflows
- Compliance
- Engagement
- Staff allocation
- Facility operations
- Real-time oversight

This system becomes the **operational backbone** for AL/MC buildings — starting with one module and scaling to a full suite.

10 Module Roadmap (#1–#10) With Problems, Solutions, and PCC Comparison

Each module solves a critical, industry-wide AL/MC problem that PCC was not designed to address.

MODULE 1 — Care Task Automation & ADL Execution (MVP)

Problem

AL caregivers rely heavily on manual task sheets, whiteboards, memory, and inconsistent documentation. This causes:

- Missed care
- No real-time oversight
- High turnover
- Poor survey readiness
- Zero consistency across buildings

PCC Limitation: PCC's ADL module is optimized for SNF clinical workflows. AL caregivers do not adopt it well.

Solution (ALOE)

- Mobile-first, tap-to-complete tasks
- Real-time dashboards for supervisors
- Automatic assignment based on service plans
- Alerts for overdue tasks
- Easy onboarding for new staff

Impact: Creates consistent, repeatable, measurable care delivery across an entire 300-building operation.

MODULE 2 — Family Transparency & Communication Portal

Problem

Families call multiple times daily for updates. Staff spend hours answering repetitive questions. Transparency is limited.

PCC Limitation: PCC does not offer modern AL family communication tools.

Solution (ALOE)

- Daily care updates
- Optional photos
- Secure messaging
- Family-facing activity & engagement overview

Impact:

- Lower call volume
 - Happier families
 - Stronger trust & retention
-

MODULE 3 — Incident Reporting & Compliance Management

Problem

Falls and incidents are documented inconsistently. Follow-ups get lost. State survey packets are prepared manually.

PCC Limitation: PCC's incident module is generic, SNF-oriented, and lacks automated AL compliance tools.

Solution (ALOE)

- Guided incident wizard
- Photo/witness capture
- Automated corrective actions
- Digital follow-up reminders
- Auto-generated state-ready PDF packets
- Portfolio-level risk dashboards

Impact: Standardized compliance processes across all 300 buildings — reducing liability and survey risk.

MODULE 4 — Scheduling Lite & Staffing Coverage Visibility

Problem

Open shifts, call-offs, and overtime plague AL buildings. No real-time staffing health indicators exist.

PCC Limitation: No scheduling, no call-off workflow, no staffing analytics.

Solution (ALOE)

- Simple schedule builder
- Call-off tracking + automated replacement requests
- Real-time green/yellow/red staffing matrix
- Integrates with care-task load

Impact: Reduces agency dependence and improves labor allocation across a large portfolio.

MODULE 5 — Activity & Engagement Management

Problem

Activities are tracked on paper. No analytics. Families have no insight into resident engagement.

PCC Limitation: Limited activity tracking and no true engagement analytics.

Solution (ALOE)

- Digital calendars
- Attendance tracking
- Resident preference profiles
- Engagement scoring
- Family visibility into activity patterns

Impact: Improves quality of life metrics and family satisfaction — a key driver of occupancy.

MODULE 6 — Maintenance & Work Order System

Problem

Maintenance teams rely on ad-hoc tools, with poor visibility into safety checks, work orders, and preventive maintenance.

PCC Limitation: No facilities management module.

Solution (ALOE)

- Work request intake
- Preventive maintenance schedules
- Life-safety checklists
- QR-code asset tagging
- Portfolio view of maintenance performance

Impact: Reduces downtime, improves safety compliance, and supports capital planning across a 300-building operation.

MODULE 7 — AL Assessment & Service Plan Builder

Problem

Assessments and service plans are inconsistent and disconnected from actual care tasks.

PCC Limitation: Assessments are SNF-clinical and do not map to daily AL care tasks.

Solution (ALOE)

- AL-specific dynamic assessments
- Auto-generated service plans
- Service plans map directly to care tasks
- Electronic signatures
- Version tracking

Impact: Closes the loop between assessment → service plan → actual care delivery.

MODULE 8 — Infection Control & Community Health Dashboard

Problem

AL buildings need tools for symptom logging, exposure tracking, and outbreak management — but lack them.

PCC Limitation: Infection control is clinical and SNF-focused, not operationally AL-focused.

Solution (ALOE)

- Symptom logs
- Exposure pathways
- Isolation status management
- Outbreak alerts
- Portfolio-wide surveillance

Impact: Operators proactively identify risk patterns and respond before issues escalate.

MODULE 9 — Predictive Staffing & Care Load Optimization (AI)

Problem

Staffing levels rarely reflect resident acuity, incident rates, or task load.

PCC Limitation: No predictive analytics for operations.

Solution (ALOE)

- AI predictions for staffing needs
- Demand forecasting tied to ADL/task data
- Overtime and agency use predictions
- Corporate benchmarking

Impact: Labor cost optimization at scale — millions of dollars saved annually in a 300-building operation.

MODULE 10 — Billing Assist, Private-Pay Ledger & Eligibility Tools

Problem

AL billing is manual, unclear, and often surrounded by disputes with families.

PCC Limitation: PCC billing is optimized for SNF, not AL private-pay models.

Solution (ALOE)

- Automated monthly invoices
- Pro-rated and add-on charges
- Level-of-care change tracking
- Payment plans
- Optional insurance eligibility checks
- Family-facing billing portal

Impact: Brings AL billing into the modern era and reduces disputes.

How ALOE Complements PointClickCare (Not Competes)

PCC = The Clinical System of Record

- Medications
- Physician orders
- Clinical notes
- Diagnostics
- SNF-level assessments

ALOE = The Operational System of Execution

- Daily care delivery
- Family engagement
- Scheduling
- Activities

- Maintenance
- Incidents
- Compliance
- Billing assist
- Predictive operational analytics

Together, they form the first complete ecosystem for AL/MC operations. PCC handles the clinical record; ALOE ensures the care actually gets delivered.

Market Potential Inside a 300-Building Operation

Immediate Improvements (Modules 1–3)

- Higher staff accountability
- Stronger compliance posture
- Lower family call volume
- Better visibility into actual care delivery

Operational Scaling (Modules 4–6)

- Unified scheduling
- Standardized activities
- System-wide maintenance & safety compliance

Portfolio Optimization (Modules 7–10)

- AI-driven staffing
- Digital service plans
- Standardized AL billing
- Enterprise-wide analytics

A 300-building operation alone can support \$3M–\$8M ARR with this suite.

Market Potential Beyond a 300-Building Operation

- **30,000+ Assisted Living communities**
- **6,000+ Memory Care buildings**
- **Residential Care/Board & Care homes**
- **Independent Living** (family and engagement modules highly relevant)
- **International AL markets**

Even **1% U.S. penetration = 300 buildings = \$3M–\$6M ARR**. A 5% penetration is a **\$15M–\$30M ARR** opportunity.

Executive Summary

PCC documents the medical record. The AL Operating Environment ensures great care actually happens.

This is a complementary, modular, scalable solution designed for AL/MC operations— the missing platform the industry has been waiting for.

If you'd like, I can now create: ✓ A polished **investor slide deck** ✓ A **1-page PDF executive brief** ✓ A **visual map of all 10 modules** ✓ A **market sizing + financial projection sheet**

Just tell me which format you prefer.
