

ALOE/Operator Handout.md

Here is a polished **operator-facing one-page handout** for **ALOE — Assisted Living Operating Environment**. You can use this as a PDF, email attachment, or slide insert. It's written in clear, business-friendly language with a strong value story.

Assisted Living Operating Environment

The calm, clear, modern way to run Assisted Living communities.

What Is ALOE?

ALOE is a purpose-built *operating system* for Assisted Living and Memory Care communities. Where your clinical EMR (like PCC) handles documentation, **ALOE handles daily operations**—the tasks, workflows, and communication that keep your building running smoothly.

It is the layer that brings **clarity, consistency, and calm** to every shift.

What ALOE Solves

1. Shift-to-Shift Chaos

Care tasks, reminders, handoffs, and resident needs often live in paper notes, texts, or memory. → ALOE creates one unified place where every staff member sees exactly **what needs to be done, by whom, and when**.

2. Family Communication Overload

Families expect updates, and staff often feel overwhelmed. → ALOE provides a structured, appropriate communication channel that keeps families informed *without disrupting care*.

3. Incident Management Gaps

Incidents get missed, delayed, or tracked inconsistently. → ALOE ensures **real-time incident logging**, automatic follow-up, and leadership visibility.

4. Inconsistent Standards Across Locations

Multi-site operators struggle to standardize workflows. → ALOE gives leadership a consistent, enterprise-ready operating environment for **every building**, without forcing culture change.

Why Operators Choose ALOE

★ It complements PCC, not replaces it

ALOE handles everything PCC doesn't—tasks, communication, shift rhythm, and building operations.

★ Built for Assisted Living, not retrofitted from SNF

ALOE fits the unique workflow of AL/MC teams: flexible, fast, and resident-experience driven.

★ Easy to use for frontline staff

Designed for caregivers with limited training time:

- Large buttons
- Simple workflows
- Clear priorities
- Mobile-friendly interface

★ Enterprise visibility for leadership

Operators get real-time insights into:

- Task completion
- Care quality patterns
- Incident trends
- Family communication
- Building-level compliance signals

★ Consistency without micromanagement

ALOE standardizes what should be consistent across buildings—while allowing each team to retain its feel.

Core Modules Available Now (and Coming Soon)

Phase 1

- Care Tasks & ADL Support
- Incident Reporting
- Family Update Portal
- Shift Handoffs
- Notes & Alerts

Phase 2

- Activities & Engagement Tracking
- Staff Scheduling Lite
- Maintenance & Work Orders

Phase 3

- Service Plan Builder
- Infection Control Dashboard
- Predictive Staffing Insights

The ALOE Advantage

✓ Reduces staff burnout ✓ Improves resident experience ✓ Builds trust with families ✓
Decreases operational risk ✓ Creates standardization across communities ✓ Delivers clarity
during every shift ✓ Scales easily to multi-state operators

When your staff feel supported and your workflows run smoothly, **resident care gets better — every day, every shift.**

Tagline Options for the Handout Footer

“ALOE brings calm to care.” “Where Assisted Living operations thrive.” “Consistency, clarity, and calm—for every building.”
